

Material Handling Guide

- Evenex is a continuous low pressure laminate pressed onto 18mm, 25mm or 32mm E0 MRMDF board.
The standard thickness of the face laminate is 0.2mm.
- Evenex panels do not have a melamine surface but rather a lacquered surface and therefore lower resistance to surface wear and scratching than standard laminates.
- Evenex is recommended for vertical use only.
- DO NOT drag/slide sheets across one another.
- Stack panels onto a flat surface, avoid leaning against walls for a prolonged period to reduce the chance of bowing.
- Evenex is not recommended for outdoor use.
- Clean with a damp, non-abrasive cloth and warm soapy water.
DO NOT use harsh chemicals.
If you do want to try a chemical please do so on an off-cut.
- Please be careful when applying adhesive tapes to the face of Evenex as some may contain solvents which can affect the face of the material.
Heat and a prolonged period of the tape being on the face can also increase the chance of damaging the surface.
