

## PaperWall™

### Care and Maintenance

#### Care

PaperWall is formulated primarily for dry-use areas.

- Use either a soft dry cloth or feather duster to remove surface dust.
- If dust accumulation is heavy, the surface may be lightly vacuumed.
- Protect from direct, bright or reflected sunlight.

#### Cleaning

Before cleaning, first test on a small, inconspicuous area.

- Blot soiled areas with a soft, clean cloth dampened with a weak solution of a mild liquid detergent.
- Dry with a soft cloth.
- Do not allow the wallpaper to become excessively wet.
- Do not use microfibre cloths for general cleaning, as they are abrasive and will gradually wear down the surface finish.
- Do not apply cleaners, solvents or chemicals of any kind.
